

IDENTIC – Company Profile

***Identic** is a Swedish company, specialising in the development and supply of products for fluid handling, measurement and control, with a focus on products which protect the environment. With more than 20 years experience in the industry Identic is the market leader in fleet management systems for commercial vehicles with an emphasis on daily servicing and refuelling systems for heavy-duty vehicles.*

Spill-free Vehicle Refilling

More than 25 years ago Identic recognised a need among professional vehicle fleet owners for a safer and more efficient vehicle refilling method. Identic developed a unique Spill-free Vehicle Refilling (SVR) system that automatically fills the vehicle tank to an optimal level without spillage.

With the immediate benefits from an improved refilling process, lowered fuel costs and a cleaner environment Identic's SVR system offers vehicle fleet owners a quick return on their investment. Identic has developed SVR solutions for Diesel, Ethanol, Gasoline, Methanol and AdBlue®/DEF.

Intelligent Depot Systems

Identic specialises in supplying fully integrated depot management systems, Intelligent Depot Systems (IDS), for bus and truck fleet operators. Turnkey systems include pumping and distribution equipment, identification and registration systems and management software.

The Intelligent Depot Systems provide the fleet operator with powerful software tools which integrate information from key functions within the vehicle depot including information from refuelling and other day-to-day servicing activities, entry and exit movements and parking location. By combining this real-time information, Identic's Intelligent Depot Systems enable the bus and truck fleet operators to improve efficiency and reduce costs.

Diesel – *Identic has been a supplier of spill-free refilling (SVR) solutions for Diesel since 1979.*

Identic developed the spill-free refilling technology for Diesel on request from vehicle fleet operators.

The Identic SVR system for Diesel has been installed in more than 200 vehicle depots and 50,000 vehicles worldwide.

Ethanol – *Identic has long experience from developing and building refilling solutions for Ethanol.*

Identic has built a large number of Ethanol refilling stations for both public service stations and vehicle fleet depots since 1992.

Identic has been awarded several large projects for building complete Ethanol refilling stations with spill-free refilling technology.

Methanol – *Identic is pioneering the use of a spill-free refilling system for use with Methanol as a fuel for vehicles.*

The system was developed on behalf of MFCA (Methanol Fuel Cell Alliance) consisting of DaimlerChrysler, Statoil, BP, Methanex, Ballard Power Systems and BASF.

The first vehicle to use this new spill-free refilling concept is the Nekar 5, a fuel cell car developed by DaimlerChrysler in the USA.

AdBlue®/DEF – *Identic has developed a spill-free refilling concept for safe and reliable vehicle refilling of the AdBlue®/DEF chemical.*

ACEA, the organisation of European vehicle manufacturers, invited Identic to develop a refilling system for AdBlue®.

Identic's spill-free solution has been designed to deal with the challenging characteristics of AdBlue®/DEF, such as crystallisation and corrosion effects.

Glassfiber Pipes – *Identic is distributor of Bondstrand® epoxy pipes from Ameron.*

These composite products offer reliable operation and better economy for many demanding applications.

Identic supplies Bondstrand® pipes to oil refineries, nuclear power plants, the Swedish air force and navy and most large industrial plants.
